

Cube

Cube is an acoustic wall module designed to add a dynamic element to any space. This wall mounted acoustic system features three different sized modules that create the optical illusion of three-dimensional cubic shapes, allowing you to create bold and creative patterns on your walls. The panels are available in a range of colors, from neutral shades to bright and vibrant hues, allowing you to customize your space to your personal style. Additionally, you can specify a custom color palette to match your unique project needs. Enhance your room's acoustic properties with a unique personality and a nod to Vasarely's optical artworks.

Maintenance

Vacuum to remove dust. Clean stains with cloth and water, avoiding rubbing. Use detergent or spot remover for tough stains, testing first in inconspicuous area.

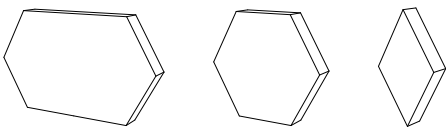

Material / PET Felt

With its textile like appearance, PET felt is a great choice for use in interior design and decorative applications. Despite its soft look, PET felt has good impact-resistance, making it a durable option for long-term use, even in demanding spaces. The open structure of felt is one of its key features, as it contributes to its outstanding acoustic properties. This means that the material can effectively absorb sound, making it an ideal choice for our products.

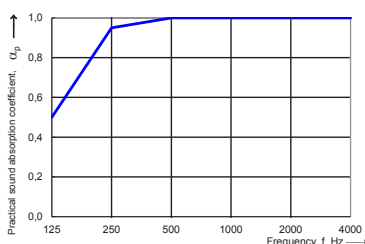

* Depth: 50 / 70 / 80 mm.

All Cube modules are available in 3 different depths for a better acoustic effect and a more dynamic appearance

Sound absorption coefficient according to ISO 11654

Designer's color palettes

Custom colors

We offer a range of customized products and services to help you achieve your desired outcome. Our standard products can be personalized to match any specific color or palette. Please note that our printed colors may differ slightly from your reference due to our raw material's natural appearance (see picture for reference), but we always do our best to match your specific color as closely as possible. To ensure this, we encourage you to send us a standard color code (NCS or PANTONE) or a reference swatch.

To customize the color of your cube acoustic module, we require three color codes. To maintain its original appearance, we suggest that you choose colors that harmonize or shades of the same one. However, if you have only one color reference and are unsure, you can contact us, and we will help you find the perfect combination.
