# Fasett

Fasett is an acoustic wall module featuring a striking geometric crystal structure. Its unique 3D shape is accentuated by the color shading on each module, with a contrasting edge that adds an element of surprise. The versatility of Fasett allows each module to be rotated and mounted in different directions, resulting in a dynamic and ever-changing pattern. Enhance your space with Fasett's innovative design, elevating both the acoustic quality and the visual appeal of any interior. Choose from a range of colors from our designers palette to match your project needs and create a stunning focal point. Optionally, we can work with you to specify a custom color or palette to match your own requirements.

Fire Rating
B-s2-d0

Maintenance
Vacuum to remove dust. Clean stains with cloth and water, avoiding rubbing. Use detergent or spot remover for tough stains, testing first in inconspicuous area.
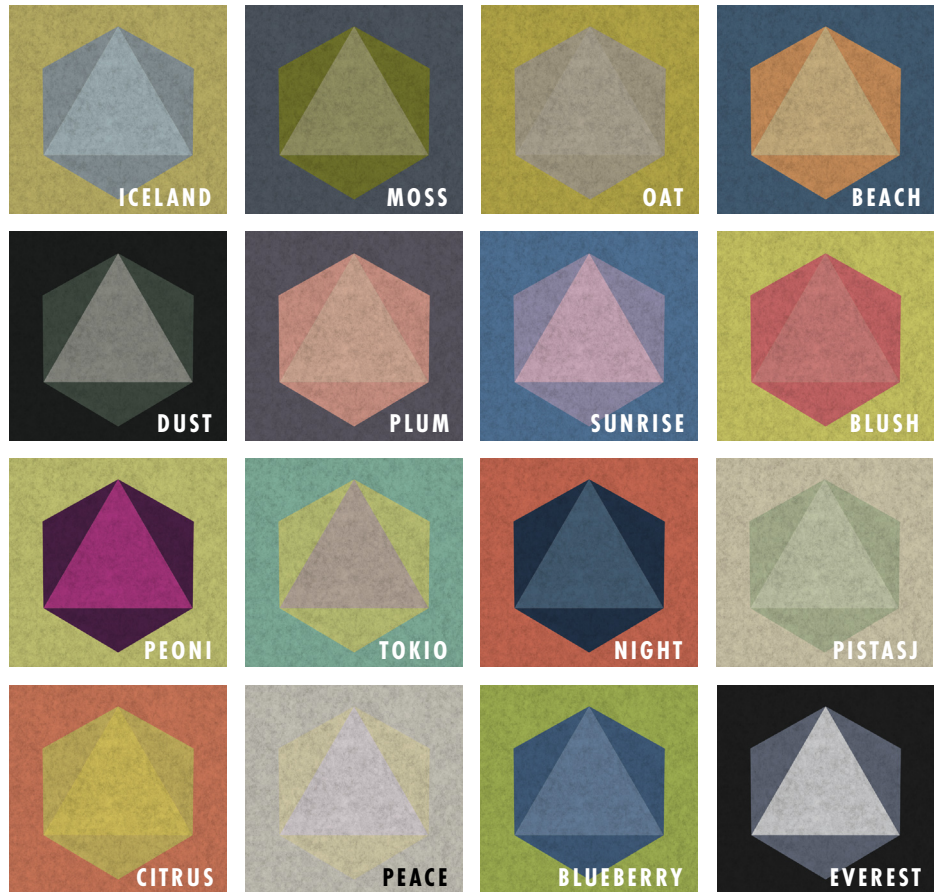

Material / PET Felt
With its textile like appearance, PET felt is a great choice for use in interior design and decorative applications. Despite its soft look, PET felt has good impact-resistance, making it a durable option for long-term use, even in demanding spaces. The open structure of felt is one of its key features, as it contributes to its outstanding acoustic properties. This means that the material can effectively absorb sound, making it an ideal choice for our products.

Sound absorption coefficient according to ISO 11654

PEONI	TOKIO	NIGHT	PISTASJ
CITRUS	PEACE	BLUEBERRY	EVEREST

Custom colors

We offer a range of customized products and services to help you achieve your desired outcome. Our standard products can be personalized to match any specific color or palette. Please note that our printed colors may differ slightly from your reference due to our raw material's natural appearance (see picture for reference), but we always do our best to match your specific color as closely as possible. To ensure this, we encourage you to send us a standard color code (NCS or PANTONE) or a reference swatch.

To customize the color of your Fasett acoustic module, we require three color codes - two for the front face and a third one for the edge. To maintain its original appearance, we suggest that you choose colors that harmonize or complement each other. However, if you have only one color reference, you can contact us, and we will help you find the perfect combination.
