

Ridge

Ridge is an acoustic wall module with a subtle three-dimensional shape. The volume of Ridge is enhanced by a subtle color variation of its two front facing surfaces. The edges of this module come with a contrasting color to accentuate the shape and creating a playful element when the modules are combined in different configurations and angles. Ridge works well by itself but can also be combined with Slope to create even more dynamic compositions. Choose from a range of colors from our designers palette to match your project needs and create a stunning focal point. Optionally, we can work with you to specify a custom color or palette to match your own requirements.

Maintenance

Vacuum to remove dust. Clean stains with cloth and water, avoiding rubbing. Use detergent or spot remover for tough stains, testing first in inconspicuous area.

Material / PET Felt

With its textile like appearance, PET felt is a great choice for use in interior design and decorative applications. Despite its soft look, PET felt has good impact-resistance, making it a durable option for long-term use, even in demanding spaces. The open structure of felt is one of its key features, as it contributes to its outstanding acoustic properties. This means that the material can effectively absorb sound, making it an ideal choice for our products.

Sound absorption coefficient according to ISO 11654

Designer's color palettes

Custom colors

We offer a range of customized products and services to help you achieve your desired outcome. Our standard products can be personalized to match any specific color or palette. Please note that our printed colors may differ slightly from your reference due to our raw material's natural appearance (see picture for reference), but we always do our best to match your specific color as closely as possible. To ensure this, we encourage you to send us a standard color code (NCS or PANTONE) or a reference swatch.

To customize the color of your Ridge acoustic module, we require three color codes - two for the front face (two shades of the same color) and a third one for the edge. To maintain its original appearance, we suggest that you choose an edge color that contrasts the front face colors. However, if you have only one color reference, you can contact us, and we will help you find the perfect combination.
